Continuation of Substance of Interview including description of the general nature of what was agreed to if an agreement was reached, or any other comments: Applicant's representative presented arguments against both cited references and the new matter rejection. After discussion, the examiner agreed that Tsai et al. can be overcome with the submitted declarations since Tsai's filing date is the same as the invention report dated 10/31/97. The examiner suggested that applicant amend the language in the example 2 to make it clear that the talc is being added to the Bionelle #1020 prior to the admixture of the resin with PLA.

Regarding Obuchi et al., the Examiner suggested that applicant amend the claims to require a PLA content less than 25%, which would be outside of the range taught in Obuchi et al. Also, applicant may present clear evidence to show that the amount of inorganic filler in the dispersed PLA phase of Obuchi et al., if any, is detrimental to the properties of interest, as opposed to any amount of inorganic filler that might be present in applicant disperses PLA claimed as being "essentially free of said inorganic filler".
